at WIL Research, as well as scientific and regulatory matters of interest.*

QS Pharma Joins WIL

Formulation Expertise and cGMP Capabilities Add New Service Offerings

QS Pharma, LLC was acquired by WIL Research Holding Company, Inc. in October 2006. The focus of QS Pharma spans the development process from the screening and identification of New Chemical Entities (NCEs) through the development of stable, bioavailable, manufacturable, and registerable dosage forms for use in clinical trials and regulatory submissions.

The addition of QS Pharma to WIL Research Laboratories, LLC, Biotechnics, LLC, and NOTOX B.V. provides new expertise to assist our clients with formulation development and production of dosage forms for accelerating the time required to early phase clinical trials. These services add another dimension to WIL Holding Company's vision for a strategic CRO portfolio of companies offering high quality, scientifically driven, complementary toxicology and drug formulation services to best serve the pharmaceutical, biotechnology and chemical industries.

QS Pharma formulation development capabilities encompass the full range of delivery options including parenteral and oral. Analytical capabilities of QS Pharma range from the transfer and qualification of an existing method to complete methods development and validation for drug substance, formulations, drug product and cleaning verification. cGMP manufacturing capabilities are available for clinical supplies of NCEs and blinding of comparators. QS Pharma offers ICH stability condition storage and analytical testing for drug substance and drug product.

QS Pharma was founded in 2002 to offer focused pharmaceutical product development services. QS Pharma, with a staff of 40 and expanding, is committed to being the leading and preferred provider for chemistry, formulation and cGMP contract services from drug discovery through regulatory submission.

QS Pharma is located close to Philadelphia, PA at 3 Chelsea Parkway, Suite 305, Boothwyn, PA 19061.
